DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see pages 2-4, filed 4/12/2010, with respect to the claim rejections have been fully considered and are persuasive. The 103(a) rejection of the claims has been withdrawn in view of the Examiner's Amendment to the claims, which places the case in condition for allowance.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Attorney Henry Steckler on 5/10/2010. Claims 1, 9 and 14 are amended below.

The application has been amended as follows:

Re Claim 1. (Currently Amended) A method of printing media comprising:
accumulating post processing instructions for printed media during printing operations;
wirelessly recording the post processing instructions on a transportable electronic
information device located on a spool, while winding the printed media ~~onto~~ around the
spool, without marking any media with the post processing instructions;

Art Unit: 2625

transporting the electronic information device on the spool holding the printed media from an online printing/copying system where the printing operations occur to a separate offline post processing system where the post processing occurs; and wirelessly playing back the post processing instructions from the information device on the spool at the offline post processing system for controlling offline post processing of the printed media while the media is unwound from around the spool.

Re Claim 9. (Currently Amended) A printing system comprising:

an online printing/copying operation having a controller for determining post processing instructions for printed media and for wirelessly recording the post processing instructions on a transportable electronic information device positioned on a spool of the printed media, while winding the printed media ~~onto~~ around the spool, without marking the post processing instructions on any media; and

an offline post processing operation operable to wirelessly play back the post processing instructions from the transportable electronic information device on the spool for controlling offline post processing of the printed media while the media is unwound from around the spool,

Art Unit: 2625

wherein the spool is configured for conveying the printed media and the transportable electronic information device together from the online printing/copying operation to the offline post processing operation.

Re Claim 14. (Currently Amended) A non-transitory computer useable medium having computer readable code means embodied therein for causing a computer to print media, the computer readable code means comprising:

computer readable program code means for causing a computer to accumulate post processing instructions for the printed media during printing operations;

computer readable program code means for causing a computer to wirelessly record the post processing instructions on a transportable electronic information device positioned on a spool of the printed media, while winding the printed media ~~onto~~ around the spool, without marking the post processing instructions on any media; and

computer readable program code means for causing a computer to wirelessly play back the post processing instructions from the information device for controlling offline post processing of the printed media while the media is unwound from around the spool after the electronic information device together with the printed media has been transported on the spool from an online printing/copying system where the printing operations occur

Art Unit: 2625

to a separate offline post processing system where the offline post processing occurs.

Allowable Subject Matter

3. Claims 1, 3-5, 9 and 11-17 are allowed.

4. The following is an examiner's statement of reasons for allowance: The Applicant's system is directed towards a printer and offline post processing system that is able to receive post processing commands from a memory component connected to a spool roller that is attached to the printer. Once the user transfers the spool roller with paper and the memory device to the offline post processing apparatus, the finishing device reads the instructions on the roller's attached memory and performs the finishing operations. The Attorney authorized an Amendment to the claims that will specify that the paper is being rolled around a spooler while information is being recorded on an attached device on the spooler. The art searched and applied to the claims does not disclose the feature of having a memory device attached to a spooler while paper is being wound around the spooler roller itself. Since the applied art does not disclose this amended claim feature and was not found in a search for prior art, the Examiner believes the claims in the case are allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
